Res. 7:217-221(2000).

CATALYTIC ACTIVITY: D-GLUCOSE 6-PHOSPHATE + NADP(+) = D-GLUCONO-DELTA-LACTONE 6-PHOSPHATE + NADPH.

PATHWAY: FIRST STEP IN PENTOSE PHOSPHATE PATHWAY.

SIMILARITY: BELONGS TO THE GLUCOSE-6-PHOSPHATE DEHYDROGENASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MKKTLSLKND--FKE----IKTDELEIII-GGSGSLS---TF---FRLFNRSF 40

```
CC carbamoyltransferase protein (1) of the invention. The ornithine CC carbamoyltransferase protein is a (argf/arcB) family polypeptide. (1) CC carbamoyltransferase protein is a (argf/arcB) family polypeptide. (1) CC and polynucleotides (11) encoding it are useful for diagnosing diseases CC carbamoyltransferase gene by determining the nucleic acid sequence CC carbamoyltransferase gene by determining the nucleic acid sequence CC encoding (1), and/or analysing for the presence or amount of (1). They CC can diagnose the stage and type of infection. (1) is also useful for CC screening for compounds which affect activity of the protein by measuring CC the binding to (1) and observing the stimulation or inhibition of the CC enhance ornithine carbamoyltransferase activity, in addition to direct administration of ornithine carbamoyltransferase polypeptides to treat CC conditions associated with a lack of ornithine carbamoyltransferase polypeptides to treat CC polypeptide, or direct administration of antibodies against it induce an immune response to CC immunise and prevent disease. Anti-(1) antibodies induced by the CC polypeptide are also useful for isolating clones expressing (1), or for CC purifying the polypeptide by affinity chromatography. Diseases diagnosed, CC prevented or treated include otitis media, conjunctivitis, pneumonia, CC meningitis. (1), (1) and their (antipaonists can prevent admession of CC bacteria to matrix proteins, and are useful for use on wounds and body CC implants to prevent bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Page 27-28; 30pp; English.

Streptococcus pneumoniae. s. pneumoniae histidine kinase polypeptide 09-JUN-1999 17-JUN-1998 bacterial adhesion; wound. Histidine kinase; two component signal transduction system; TCSTS; bacterial; immune response; infection; otitis media; conjunctivitis; AAY03650 standard; Protein; 446 AA 20-JUN-1997; 20-JAN-1999. bacteremía; sinusitis; (SMIK ) SMITHKLINE BEECHAM CORP (SMIK ) SMITHKLINE BEECHAM PLC. (first entry) 97US-0879941 98EP-0304782 pleural empyema; endocarditis; meningitis;

New Histidine Kinase polypeptide and polynucleotide - usef diagnostic reagents and for prevention and treatment of Streptococcus pneumoniae infections, especially meningitis 1999-083576/08 DB; AAX29247.

useful as

of the two component signal transduction system (TCSTS) in bacteria. The CC gene encoding the mature polypeptide can be isolated from S. pneumoniae CC 010093. Host cells containing a vector comprising the nucleic acid are CC 010093. Host cells containing a vector comprising the nucleic acid are CC underexpression of the protein of the protein. HK polypeptides and CC polynucleotides are useful for diagnosing diseases related to over or CC determining HK polypeptide or mRNA expression levels due to an infection of an organism with the HK gene. The polypeptides are also useful for CC screening for compounds which affect activity of the protein. These can CC enhance (agonist) HK activity. The polypeptides (administered directly, CC in a vector and as a vaccine) and antibodies induce an immune response to immuniae and prevent disease. Diseases diagnosed, prevented or treated CC include: bacterial infections, especially S. pneumoniae infections, which CC cause otitis media, conjunctivitis, bacteremia, sinusitis, pleural CC polypucleotides and their (ant)agonists can prevent adhesion of bacteria to matrix proteins, and are useful for use on wounds and body implants to prevent bacterial infection. This represents a histidine kinase (HK) polypeptide which is a component

Streptococcus pneumoniae; response regulator; histidine kinase; infection; antibacterial; otitis media; conjunctivitis; pneumonia; bacteremia; sinusitis; pleural empyema; endocarditis; meningitis.
for diagnosing diseases, particularly for diagnosing the stage and type of an infection using PCR. Diseases related to expression or activity of RR proteins can be diagnosed by determining the nucleotide sequence encoding RR, or by analysing for the presence or amount of RR proteins. RR proteins can be used to screen for agonists and antagonists
                                                                                                                                                                                                                          New response regulator polypeptide and diagnostic reagents and for prevention Streptococcus pneumoniae infections
                                                                                           The present sequence represents histidine kinase from Streptococcus pneumoniae, which is cognate of the response regulator (RR) of the present invention. RR proteins and polynuclectides are useful as research reagents and as materials for discovery of treatments of,

Treatment of diseases related to protein activity can be treated by administering antagonists to prevent expression, and RR proteins to enhance expression levels of the protein. RR proteins and polynucleotides can be administered as a vaccine to protect against disease, and can prevent adhesion of bacteria to matrix proteins, and are useful for use on wounds and body implants to prevent bacterial infection. Antibodies are useful for treating bacterial infections, and can isolate or identify clones expressing RR proteins, and can purify the proteins by affinity chromatography. Diseases diagnosed, prevented or treated include: otitis media; conjunctivitis; pneumonia; bacteremia; sinusitis; pleural empyema; endocarditis and particularly meningitis, and infections caused by
                                                                                                     Streptococcus pneumoniae; response regulator; histidine kinase; infection; antibacterial; otitis media; conjunctivitis; pneumonia; beacterial; bleural empyema; endocarditis; meningitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      be diagnosed by determining the nucleotide sequence encoding RR, or by CC analysing for the presence or amount of RR protein. RR proteins can be used to screen for agonists and antagonists which interact with RR cC used to screen for agonists and antagonists which interact with RR proteins by observing the binding, or stimulation or inhibition of RR cC proteins by observing the binding, or stimulation or inhibition of RR cc activity, and RR proteins can be used in treatment to inhibit RR cC associated with a lack of RR protein. Diseases can be prevented by CC inoculating with RR protein, or a vector which expresses RR protein. RR cC proteins and polynucleotides can prevent adhesion of bacteria to matrix corporations, and can isolate or identify clones expressing RR proteins. CC infections, and can isolate or identify clones expressing RR proteins. CC and can purify the proteins by affinity chromatography. Diseases can disposed, prevented or treated include: otitis media; conjunctivitis; pneumoniae bacteremia; sinusitis; pleural empyema; endocarditis and consensations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents histidine kinase from Streptococcus pneumoniae, which is cognate of the response regulator (RR) of the present invention. RR proteins and polynucleotides are useful as research reagents and materials for discovery of treatments of and diagnostics for disease, and particularly for diagnosing the stage and type of an infection by PCR. Diseases related to expression or activity of RR can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New response regulator polypeptide and polynucleotide - useful as diagnostic reagents and for prevention and treatment of Streptococcus pneumoniae infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DЬ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              맑
                                                                                                                                    This invention describes novel isolated Streptococcus pneumoniae polynucleotides (see AAZ956173-Z96494) and their encoded proteins (see AAY85792-Y86182). The DNA, vectors and host cells described in the method of the invention are useful for the recombinant expression of the polypeptides. The polypeptides are useful for treatment or prevention of disease, or diagnosis of disease related to expression or activity of such a polypeptide. They can also be used to screen for compounds which interact with and inhibit or activate such a polypeptide. The polypeptides (or DNA encoding them, via gene therapy) are also useful for inducing an immunological response in ammmal. The antagonists are particularly useful to identify antimicrobial compounds and antibiotics. They are also useful to determine their role in pathogenesis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Streptococcus pneumoniae proteins and related DNA - screening compounds for antibacterial activity % \left( \frac{1}{2}\right) =\frac{1}{2}\left( \frac{1}{2}\right) +\frac{1}{2}\left( \frac{1}{2}\right

                                                                                                                         ARH5008 represent oligonucleptide sequences and primers which are used in the exemplification of the present invention.

N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472, no sequences are present for SEQ ID NO:4455 to 4464.
                                                                                                                                                                                                                                                       (I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucletc acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identity compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA polypuclectide sequences from the present invention. AAH55091 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   09-NOV-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Staphylococcus epidermidis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Staphylococcus epidermidis SRl strain; infection; diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S. epidermidis open reading frame protein sequence SEQ ID NO:780

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents a Streptococcus pneumoniae protein that, based con homology with a Staphylococcus aureus protein, is an argB protein, cand is encoded by a DNA sequence of the invention. The DNA sequences were isolated from S. pneumoniae strain 010093 (NCIMB 40794). The CS treptococcus pneumoniae proteins of the invention can be used to identify compounds which interact with and inhibit or activate the cativity of the proteins. Antagonists can be used to treat diseases compounds which interact with and inhibit or activate the caused by S. pneumoniae proteins, through genetic immunisation. They can calso be used to induce an immunological response in a mammal by incleic acids in a vector adequate to produce antibody and/or T cell immune responses to identify antimicrobial compounds which are capable of compounds which are capable of compounds their bioactivity. In particular the proteins of the invention can be used to prevent adhesion of bacteria to mammalian extracellular mediated mammalian cell invasion, and to block the normal progression of pathogenesis in infections initiated other than by the implantation of compounes in infections of there invention compounes in infections initiated other than by the implantation of compounes in infections of the invasion of the invasion of compounes in infections of the invasion of the invasion of compounds which are capable of compounds which are capabl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     in a mammal by inoculation with the S. pneumoniae proteins or delivery of the encoding nucleic acids in a vector adequate to produce antibody and/or T cell immune responses to protect the animal from disease. The proteins can also be used to identify antimicrobial compounds which are capable of inhibiting their bioactivity. In particular the proteins of the invention can be used to prevent adhesion of bacteria to mammalian extracellular matrix proteins on in-dwelling devices or in wounds, to block protein-mediated mammalian cell invasion, and to block the normal progression of pathogenesis in infections initiated other than by the implantation of in-dwelling devices or other surgical techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The DNA sequences were isolated from Streptococcus pneumoniae strain 0100993 (NCIMB 40794). The Streptococcus pneumoniae proteins of the invention can be used to identify compounds which interact with and inhibit or activate the activity of the proteins. Antagonists can be used to treat diseases caused by S. pneumoniae proteins, through genetic immunisation. They can also be used to induce an immunological response in a mammal by inoculation with the S. pneumoniae proteins or delivery

These genomic DNA sequences encode the novel proteins given in AAX1114 to AAX11367. The proteins, isolated from Streptococcus pneumoniae, can be used in vaccines against streptococcal infections and in assays for identifying compounds that inhibit or activate the activity of the proteins. The antagonists can be used to treat an individual having need to inhibit a bacterial protein. Vectors expressing the proteins can be used to induce a
            The present invention describes a purified or isolated nucleic acid sequence (I) consisting essentially of one of the 93 nucleotide sequences given in AAH81202 to AAH81294, where expression of the nucleic acid in a microorganism is capable of inhibiting proliferation of a microorganism. (I) have antibacterial and antibiotic activities, and can be used in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of the microorganism, and the manufactured antibiotic is useful for reducing the activity or level of a gene product regulared for proliferation of a microorganism in a subject, specifically humans. The nucleic acids that inhibit bacterial growth or proliferation can be used as antisense therapeutics for killing bacteria. In addition to the the sequences complementary to sequences required for proliferation can be used as diagnostic tools. For example, nucleic acid probes complementary to proliferation-required sequences that are specific for particular species of microorganisms can be used as probes to identify particular species of microorganisms can be used as probes to identify particular microorganism species in clinical specimens.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents histidine kinase (HK) isolated from Streptococcus pneumoniae. HK polynucleotides and polypeptides are useful for diagnosing susceptibility to diseases by detecting mutations or C for diagnosing susceptibility to diseases by detecting mutations or C polymorphisms in the HK gene or analysing for the presence or amount CC of HK polypeptide expressed in a patient sample. HK PCR probes are useful for diagnosing diseases (especially Streptococcal), and can C characterise the stage and the species or strain causing the infection. The HK probes can also determine the response of the infectious organism CC the HK probes can also determine the response are useful for screening CC for antagonists, agonists and polynucleotides are useful for screening CC HK agonists, agonists and drugs against infectious micro-organisms. CC HK agonists and antagonists are bacteriostatic and bacteriocidal compounds which can be used in treatment to enhance (agonist) or block cantagonist or antisense sequence) HK activity, therefore treating conicrobial (especially Streptococcal) diseases, ulcers and gastritis, and Stomach cancer caused by Heliobacter pylori. Epitopes of HK polypeptides and polynucleotides are useful immungens for producing anti-HK polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                   present invention are also useful for the identification of agents or drugs which are useful in preventing bacterial proliferation or kill bacterial cells e.g. potential antiblotics. The peptides and methods are also useful for providing important epidemiological tools. The peptide are especially useful for the prevention of any disease caused by a bacterium e.g. Staphylococcus aureus, Acinetobacter, Enterococcus faecalis, Escherichia coli, Pseudomonas aeruginosa all of which can cause blood polsoning among other ailments, Mycobacterium tuberculosis which causes tuberculosis, Shigella dysenteria which causes dysentery, and Neisseria gonorrhoeae which causes gonorrhoea. The peptides are also useful in the treatment of infections due to Streptococcus pneumoniae a bacterial species that causes blood polsoning, middle ear infections, pneumonia and meningitis in humans. The present sequence represents a energy historia in the present sequence represents a pneumonia and meningitis in humans. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes peptide antibiotics which inhibit the growth of pneumococci, ABC transporter and two-component signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Streptococcus pneumoniae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antibiotic; growth inhibition; bacterial autolysis; regulation; antibacterial; infection; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Streptococcus pneumoniae sensor histidine kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAY57684 standard; Protein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 QY
                                                                The present sequence represents a Staphylococcus aureus Histidine kinase. The protein is related, by amino acid homology to the Escherichia coli KdpD histidine kinase protein. The protein can be used to treat an individual in need of histidine kinase, while the antagonist is used to inhibit histidine kinase. DNA encoding and expressing histidine kinase are is used in immunological compositions. The active agents are useful
                                                                                                                                                                                                                  New DNA encoding Staphylococcus aureus histidine kinase used to prevent, treat, diagnose and vaccinate against - e.g. respiratory tract infections and cardiac, gastrointestinal, CNS, eye, kidney, urinary tract, skin, bone and joint disorders
                 for preventing, treating, diagnosing and vaccinating against infections of the upper and lower respiratory tract, cardiac disorders, gastrointestinal disorders, CNS disorders eye disorders, kidney and

The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella Cc pneumoniae, Besudomonas aeruginosa and Entercoccus facealis. The cc invention is also useful for the identification of potential new targets cf for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. Cc and to obtain antibodies capable of binding to the expressed proteins. Cc The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen compounds in rational drug discovery compounds in cleic acids which are required for cell proliferation in cc a wide variety of organisms. The present sequence represents an cc sential prokaryotic cellular proliferation protein.

Cc Note: The sequence data for this pattent did not form part compounds in the printed specification, but was obtained in electronic cf fra wino introm will be a compound to the printed specification at the sequence and the province in this pattent did not form wino introm wino introm

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       dd
                                            The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the CC genes, their use in the discovery of novel antibiotics, the essential CC genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, CC and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery Cp programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an CC essential prokaryotic cellular proliferation protein.

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  21-MAR-2000;
